Terminal Disclaimer

The terminal disclaimer filed on February 2, 2005 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of application 10/324,368 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Allowable Subject Matter

Claims 1 -6 are allowed.

The best prior art of record particularly, Henry et al. (US 6,444,064 B1), teach a registration system and a method useful for controlling and correcting the phase and position of simultaneously advancing webs having pre-printed objects spaced at a pitch length characterized by small but significant pitch variation to a target web. However Henry et al. does not teach the following claim limitations.

The primary reason for the allowance of claims 1 and 5 is the inclusion of the method steps of coupling the pitched unit operation with a controlled web metering point by providing a converter position reference signal fed forward from the pitched unit operation functioning as an independent axis to the- controlled web metering point functioning as a dependent axis in order for the pre-produced object of the controlled web be in phase automatically with the pitched unit operation; and adjusting the target position in order to phase the actual position based on the controlled web bias.. It is

these steps found in each of the claims, as it is claimed in the combination, that has not

been found, taught or suggested by the prior art of record which makes these claims

allowable over the prior art.
